OTHER GCC MARKETS	Qatar, Kuwait, Oman, Bahrain
BUSINESS ROOTS	2018 - Foshan Fannai Furniture Co., Ltd.
BUSINESS MODEL	In-house manufacturing
SUPPLY BASE	China
MAIN CONTACT	sales@gulfforma.com

Why the legal entity matters

The entity that signs your contract is the same entity that manufactures and inspects the order. The details above can be cross-checked against China's national enterprise credit information system (gsxt.gov.cn).

WHAT WE DO

We do not just sell furniture. We manufacture it to your specification.

GulfForma works from your project requirement - a BOQ, drawings, a specification or a product list - rather than from a fixed catalogue. One commercial contact, one specification, one export.

01 BOQ review
Your bill of quantities read line by line, with ambiguity flagged before pricing.

02 Specification engineering
Requirements developed into a manufacturable specification before pricing.

03 In-house production base
Our own base covers seating, casegoods, joinery and partitions, with partner capacity beyond it.

04 Quotation
A costed line-by-line response you can compare directly with other suppliers.

05 Specification confirmation
Materials, finishes, dimensions and hardware confirmed in writing.

06 Sample coordination
Physical samples, finish panels and shop drawings for approval.

07 Production
Scheduled against your programme, with progress reported rather than assumed.

08 Quality control
Inspection by category before packing, with dated photographs and findings.

09 Packaging
Knock-down or crated packing planned around container utilisation.

10 Shipping
Export documentation and loading, with transport responsibilities agreed per order.

HOW A PROJECT RUNS

From BOQ to delivery

A sequence a purchasing manager can follow, with a documented decision at every stage.

01
Send your BOQ
BOQ, drawings, specification or product list - in any format.

02
Requirement review
Quantities, finishes, materials and site constraints clarified.

03
China supply and quotation
Manufacturers matched and a costed response returned.

04
Sample and approval
Finish samples and shop drawings approved before production.

05
Production and QC
Produced, monitored and inspected before packing.

06
Shipping to GCC
Packed and documented, with shipping scope agreed in the quotation.

MANUFACTURING BASE

Produced in Foshan, Guangdong

Our 50,000 m² manufacturing base in Gaoming District, Foshan has a production team of 100+ employees. Panel stock, cutting, edge banding and assembly operate in one facility, with years of experience in manufacturing and export for overseas buyers.

Production premises, Gaoming District, Foshan

Production hall - panel stock, cutting and edge banding

Panel cutting - worktops and screens cut to the approved list

Edge banding - where panel finish quality is decided

Workstation screens produced in batches

Yard and dispatch - material in, finished orders out

Cutting

Programmed panel saws cut worktops, screens and casegoods to the approved cutting list.

Edge banding

Bonding and trimming are checked here - this is where panel furniture quality is decided.

Batch production

Screens and panels are produced in batches, so a phased handover keeps identical components.

PRODUCT RANGE

Commercial furniture for GCC projects

Seven core categories, specified against your BOQ and manufactured to order.

Workstations

Bench, cluster and cubicle systems for large floors.

Executive Desks

Private office and board-level desking with credenzas.

Meeting Tables

Boardroom and meeting room tables with power and AV routing.

Office Chairs

Task, executive and visitor seating to a defined specification.

Office Storage

Pedestals, lockers, filing and wall storage.

Reception Furniture

Custom counters, waiting seating and lobby furniture.

Office Partitions

Glazed, acoustic and demountable partition systems.

QUALITY CONTROL

Problems are found before packing, not after arrival

Rejecting furniture after it reaches the destination is close to useless: the container has shipped, the site is waiting, and the practical answer is to accept and repair. GulfForma therefore inspects before packing and reports findings rather than summarising them.

Inspection points by category

- Worktops: material, thickness and decor match the approved sample
- Edge banding: continuous, matched in colour and fully bonded
- Frames: dimensions as drawn, no racking or twist when assembled
- Screens: fabric colour and weave consistent batch to batch
- Cable trays, grommets and power provision aligned to the drawing
- Seating: mechanism function, gas-lift class marking present
- Foam density and stitch quality consistent within a batch
- Storage: runner smoothness, lock and master-key operation
- Joinery: veneer matching, lacquer quality, inlay alignment
- Partitions: glass thickness, framing alignment, hardware operation

> **Inspection by category, not by order**
>
> Each category is inspected as it completes production, so a problem found in seating can still be corrected while workstations are being manufactured.

DELIVERY AND EXPORT

Packing and export, with delivery scope agreed per order

Furniture is bulky and light, so containers usually fill by volume. Packing method therefore has more effect on freight cost than any negotiation with the shipping line.

- Knock-down packing for workstation frames, storage and partitions - large volume reduction
- Flat-packed panels with edge protection for laminate components
- Crated and blanket-wrapped units for veneer, lacquer and reception joinery
- Palletised and stretch-wrapped seating with mechanisms protected
- Export documentation prepared for GCC destinations
- Container loading coordinated with your site readiness and unloading arrangements

Planned before production, not after

Packing method is agreed when the order is placed, in discussion with whoever will assemble and install on site. Choosing it after production is where damage and volume problems begin.

Shipping & Delivery Terms

Shipping and delivery arrangements are agreed for each order. The confirmed quotation or sales contract specifies the trade term, named place or port, applicable Incoterms edition and each party's responsibilities. Destination clearance, inland transport, unloading and installation are included only as expressly agreed.

WHY GULFFORMA

A procurement partner, not a catalogue

One accountable party

The commercial relationship, the manufacturing capability and the export process sit with one entity - not spread across factories, agents and forwarders.

Specification, not product names

We quote against your materials, finishes and performance requirements, so the price you approve is the product you receive.

Quality control before shipment

Inspection by category, with dated photographs and a written findings list - issued before the container sails, when problems are still fixable.

Consolidated export

Several categories produced to one finish reference and shipped together, reducing freight cost and the number of site movements.

Honest lead times

We state what is not achievable at quotation stage rather than after the order is placed.

No invented references

We do not publish fabricated project references or quantities. Where a reference can be shared for your project, we will provide it directly.

NEXT STEP

Request a Project Quote or send your BOQ

Send your BOQ, drawings, specifications or product requirements. Our team will review the scope and return a costed, specification-based response.
